We recently started fitting some clients with Loon Buoyancy swim shorts as an essential tool for hydro therapy and aqua fitness. We found that patients are able to better achieve the range of motion required for their rehabilitation when using this product compared to other buoyancy products available.

In the case of 50 years old patient C her inability to float prevented her from performing many of the excersices related to her back injury. Despite the initial challenge of developing the upper body strength required to keep from tipping forward she was able to achieve that and she is now able to perform her back strengthening exercises.

Guy Bahar
Chiropractor

As a swim instructor and an athlete I find this product has endless benefits to new swimmers in building confidence. The ability to build motor skills and muscle memory is enhanced while keeping afloat helps with confidence.

For professional swimmers BUOYANCY shorts offer a chance to concentrate on upper body allowing it to roll and stroke more efficiently without the destruction of keeping the legs elevated replacing the traditional Pullbuoy.

Old school methods of training new swimmers might shy away from too many floatation aids but if you want to narrow the list down this product is in the "keep" column.
